MARKET SERIES

SET50 daily index

2012-2025 | 116 TA features | t+1 target

Numerical inputs are reconstructed using only information available by the close of day t.

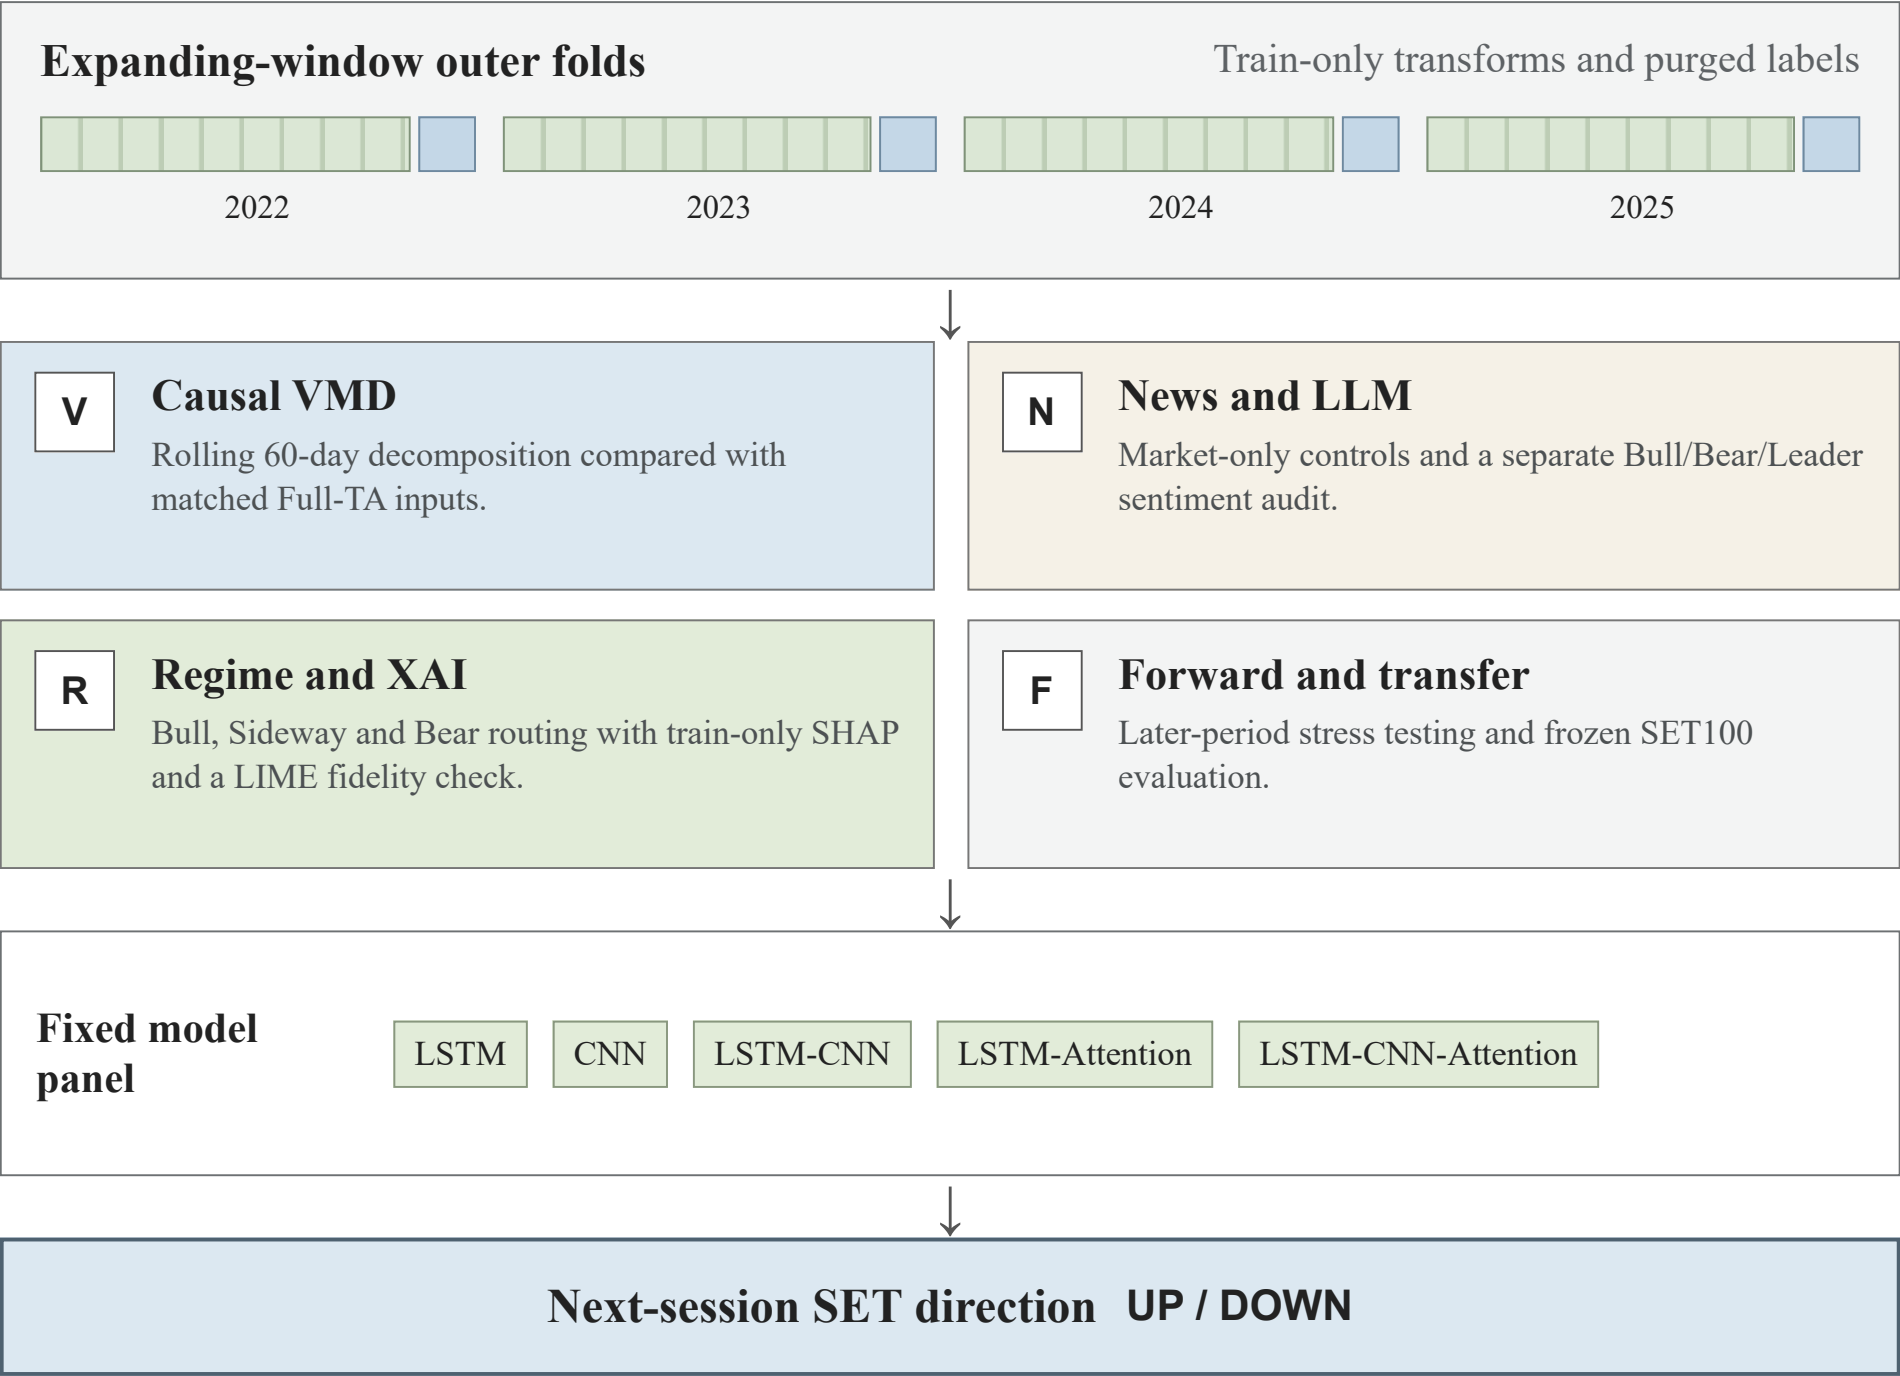

NEWS

SECOND MODALITY

Dated financial news

Out-of-sample sentiment with date, ticker and relevance filtering.

Point-in-time evaluation

Summary of findings

Best mean balanced accuracy

LSTM-CNN-Attention; four held-out years and five seeds.

53.64%

Regime-SHAP

Largest selective forecasting gain, observed for CNN.

+1.46 pp

Leader sentiment

Gain over equal-call and near-cost controls; intrinsic endpoint.

+5.93 / +6.00 pp

Causal VMD

Architecture-dependent change in balanced accuracy.

-0.60 to +0.35 pp

Robustness interpretation

Predicted news did not provide a consistent directional gain.

Frozen SET100 transfer was weaker across all five models.

Observed benefits depended on architecture and endpoint.

The audit identifies selective improvements while preventing a model-specific gain from being presented as universal superiority.

962 held-out sessions • four outer test years • five fixed seeds • paired comparisons • Holm-adjusted inference
