Features are reconstructed using only information available by the close of day t.

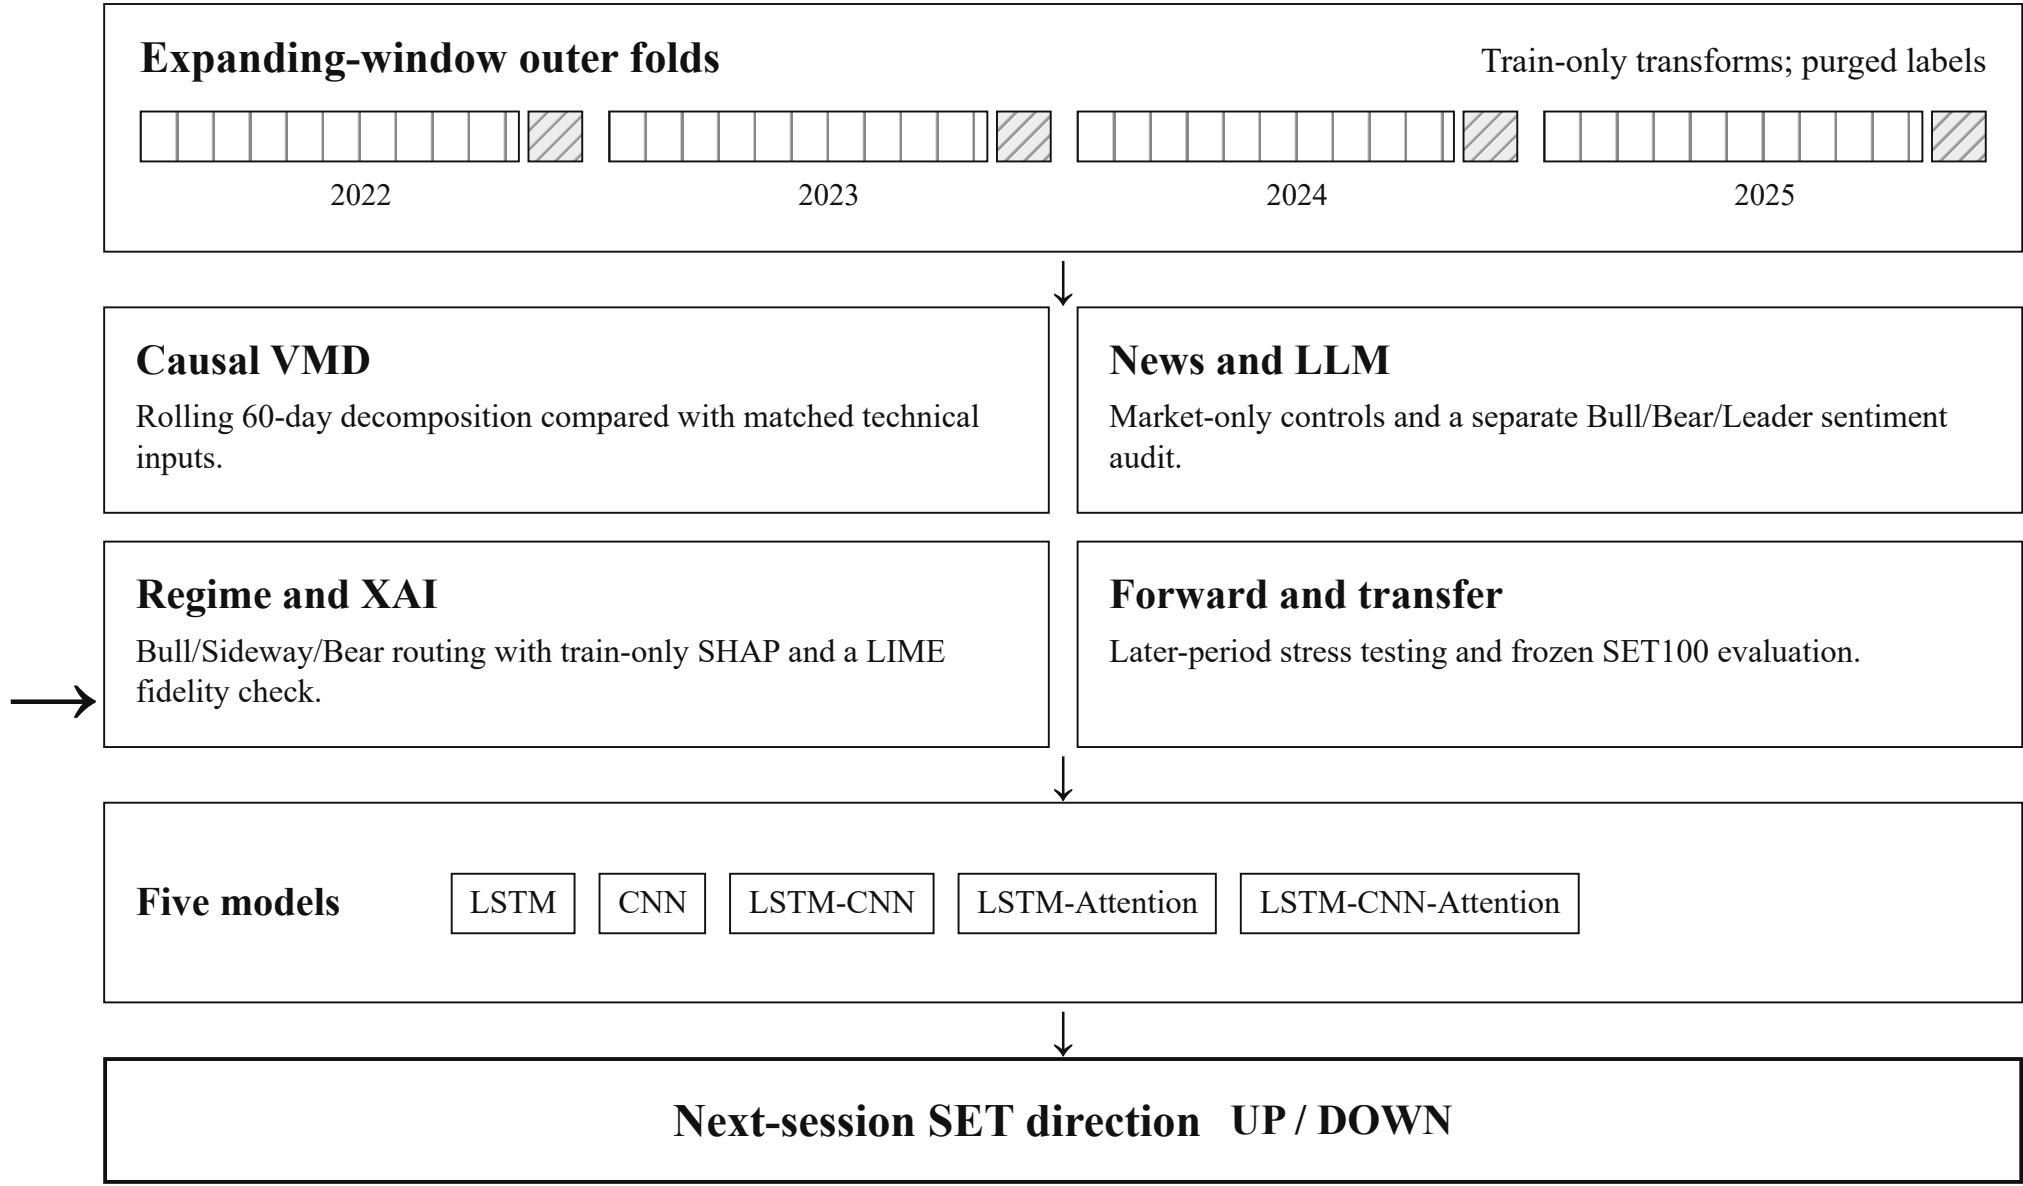

NEWS

SECOND MODALITY

Dated financial news

Out-of-sample sentiment with date, ticker and relevance filtering.

Point-in-time reliability evaluation

Main findings

Best mean balanced accuracy

LSTM-CNN-Attention across four held-out years and five seeds.

53.64%

CNN with Regime-SHAP

Largest selective forecasting gain.

+1.46 pp

Leader sentiment

Gain over equal-call and near-cost controls; intrinsic endpoint.

+5.93 / +6.00 pp

Robustness checks

VMD effect: -0.60 to +0.35 percentage points.

Predicted news: no consistent forecasting gain.

SET100 transfer: lower mean balanced accuracy for all five models.

Improvements were architecture- and endpoint-dependent rather than universal.
